With the introduction of the roof outlet Akasison XL75, Akatherm has also simplified its range of available roof outlets.

Our roof outlet Akasison XL75 is the new solution for all standard roof types and replaces the current range for this application. Akatherm offers a vertical pipe connector for the standard siphonic installations. A roof outlet with horizontal pipe connector is available when a horizontal exit is required.

Our current range of plastic based roof outlets is reduced to the X62 and X630 to still offer a solution if a connection to the vapour barrier is required. The X62 and X630 have new article numbering as well due to minor product updates.

This document shows the transition roadmap for our plastic based roof outlets including pictures and all article numbers. On the last page of this document you can find a simplified transition table.
